VegPro Smart Farm — Admin User Manual

Product: VegPro Smart Farm (Scouting)

Live URL: https://scouting.kongoniriverfarm.com/

Audience: System Administrator (e.g. Dev)

Version: October 2026 handover

This manual is a step-by-step guide for correct daily use of the **Admin** role.

---

1. Access and sign-in

1. Open a browser (Chrome or Edge recommended).
2. Go to: **https://scouting.kongoniriverfarm.com/**
3. On the sign-in screen:

- Choose **Admin** (or sign in with an admin email).

- Enter your **email** and **password**.

- Optionally tick **Remember me**.

1. Click **Sign in**.
2. You should land on the **Admin Dashboard**.

Demo seed account (change after go-live):

Role	Email	Password
Admin	`admin@vegpro.com`	`VegPro2026!`

> *Change this password after training. Do not share admin credentials with field workers.*

If sign-in fails

- Confirm you are on **https** (not http).
- Confirm the account is an **admin** role.
- Ask IT to confirm the site and database on FDB are running.

---

2. Admin menu overview

After login, the left menu shows:

Menu item	Purpose
Dashboard	Farm overview, KPIs, alerts, live activity
Scouting	Heat grid, scout routes, pressure, spray program, scouting records
Map	Hotspots and field locations on the farm map
Staff	Create field worker and farm manager logins; see who is in the field
Trends	Workforce / infestation trend views
History	Longer-term history and greenhouse health views
Approvals	Review and approve / reject pending field submissions
Activity logs	Activity / QR style log table

Use the menu to move between areas. On a phone, open the menu with the menu (☰) button.

---

3. How to add users (staff accounts)

Admins can create **Field worker** and **Farm manager** logins from the app.

3.1 Open Staff

1. Sign in as **Admin**.
2. Click **Staff** in the left menu (`/admin/workforce`).

3.2 Create a new account

1. In **Create staff account**, fill in:

- **Full name** — person's real name.
- **Email** — unique login email (required).
- **Phone** — optional but recommended.
- **Role**:
- **Field worker** — scouting on phones in the greenhouse.
- **Farm manager** — dashboards, scouting reports, spray logging, workers view.
- **Password** — at least 8 characters (the screen can generate one).

1. Click **Create account** (or the equivalent primary button).
2. When creation succeeds, **copy the password immediately** and give it to the user securely. The system does not show the password again later.
3. Tell the user:

- Website: https://scouting.kongoniriverfarm.com/

- Email + password you created

- Which role to choose on the login screen (Worker or Manager)

3.3 Rules

- Only **admins** can create staff accounts.
- Emails must be unique.
- Farm managers in the system use the **supervisor** role internally; the UI label is **Farm manager**.
- Creating additional **admin** accounts is an IT / database task — not done from the Staff form.

3.4 After creating a user — quick check

1. Sign out (or use another browser / phone).
2. Sign in with the new email and password.
3. Confirm the correct home screen opens:

- Worker → **Home** / **Field work**

- Farm manager → **Dashboard**

---

4. Master data: farms, greenhouses, varieties

The live system is configured for VegPro scouting on the **Star / Bemack** farm context, with greenhouse and variety lists used by the scout forms and reports.

4.1 What you use day to day (no change needed)

Master data	How scouts / managers use it
Farm	Assigned automatically from the live farm configuration
Greenhouses	Selected by GPS nearest-house assignment, or override on Field work
Varieties	Chosen on each scout stop (lists come from configured variety master data)
Pests / diseases	Chosen on each scout stop from the configured lists
Scouting parameters	Optional ratings on the scout stop form

4.2 How to add or change farms, greenhouses, varieties

There is **no "Add farm / Add greenhouse / Add variety" button** in the Admin screens in this release. Master data is maintained in the **MS SQL `Scouting` database** on FDB (and matching app master lists where required).

Correct procedure when VegPro needs a new greenhouse, variety, or farm:

1. Collect the details in writing:

- Farm name
- Greenhouse codes/names, GPS anchors if known, area if known
- Crop category and variety names

1. Send the request to the person responsible for FDB / SQL (IT or your implementation partner).
2. They apply the change in database `Scouting` (tables such as `dbo.farms`, `dbo.greenhouses`, `dbo.crop_categories`, `dbo.crop_varieties`) using the approved SQL scripts / change process.
3. If the field form also uses built-in Star/Bemack lists in the app, the same change may need a small app update and rebuild on FDB.
4. After the change, smoke-test:

- Worker can select the new greenhouse / variety on **Field work**.
- Manager **Scouting** / **Map** show the new house when data is logged.

4.3 Current seeded baseline (reference)

Production was seeded with core farm/greenhouse/variety rows for scouting go-live. Exact codes on site may include Star house labels (STGH…) as used in the field UI. Confirm the live list on:

- Worker → **Field work** → greenhouse override list
- Manager/Admin → **Scouting** → greenhouse dropdowns

---

5. How to access reports (Admin)

5.1 Dashboard (daily overview)

1. Open **Dashboard**.
2. Review KPI cards (scouting activity, hotspots, sprays, workers in field, severe issues — labels as shown on screen).
3. Review **alerts / needs attention**.
4. Use the **live activity feed** to see recent field events.
5. Use quick links (if shown) to jump to Scouting, Map, Workers/Staff, or History.

5.2 Scouting report

1. Open **Scouting**.
2. Use this screen for:

- **Spray / work program** — houses/varieties needing spray or monitoring from recent pressure
- **Heat grid** — pressure by location inside a greenhouse
- **Scout routes** — rounds and stops
- **Records table** — detailed scouting stops (greenhouse, variety, issue, rating, time)

1. Change the greenhouse filter/dropdown to compare houses.

2. Click cells or rows where the UI allows drill-down for issue detail.

5.3 Map report

1. Open **Map**.
2. Review hotspot / spray pins and worker-related markers as shown.
3. Use map actions (for example mark sprayed / resolved) only when those buttons are available for the selected item.

5.4 Trends and History

1. Open **Trends** for workforce / infestation trend panels.
2. Open **History** for multi-week / multi-month style views and greenhouse health summaries.

5.5 Activity logs

1. Open **Activity logs**.
2. Review tabular activity history for audit-style checks.

5.6 Export / PDF (where available)

Some screens support browser print or in-app PDF download controls. Use **Print** → **Save as PDF** from the browser if you need a file for email or filing.

---

6. Approvals (Admin)

1. Open **Approvals**.
2. Review the list of **pending** field submissions.
3. Open evidence / notes when shown.
4. Choose **Approve** or **Reject** for each item.
5. Confirm the item leaves the pending list after a successful update.

> *If the list is empty, there are no pending items — that is normal.*

---

7. Recommended daily Admin checklist

1. Sign in and open **Dashboard** — check alerts and KPIs.
2. Open **Scouting** — review today's pressure and spray program.
3. Open **Map** — confirm hotspots look correct.
4. Open **Approvals** — clear any pending items.
5. Open **Staff** only when you need to create or check accounts.

---

8. Security and good practice

- Do not share the admin password.
- Create separate logins for each person (no shared “worker” account if avoidable).
- When creating accounts, send passwords privately (not in a group WhatsApp if possible).
- Prefer **HTTPS** on phones so GPS and sign-in cookies work correctly.
- After training, change demo passwords (`VegPro2026!`).

---

9. Getting help

Issue	Who
Site down / cannot open URL	IT (FDB, IIS, DNS, certificate)
Cannot create users / login errors	Admin + IT (database `Scouting`, app service)
Wrong greenhouse or variety list	Master-data change request (see section 4)
Training / how to use screens	Admin trainer (train-the-trainer)
