VegPro Smart Farm — Farm Manager Manual

Product: VegPro Smart Farm (Scouting)

Live URL: https://scouting.kongoniriverfarm.com/

Audience: Farm managers

Version: October 2026 handover

This manual explains step-by-step how to use manager reports and spray logging correctly every day.

---

1. Sign in

1. Open **https://scouting.kongoniriverfarm.com/**
2. Choose **Manager** (Farm manager).
3. Enter your **email** and **password** → **Sign in**.
4. You should see the **Farm manager** menu.

Training account (change after go-live):

Email	Password
`manager@vegpro.com`	`VegPro2026!`

Your farm will give you your own login. Do not share passwords.

---

2. Farm manager menu

Menu	Use it for
Dashboard	Daily KPIs, alerts, activity overview
Map	See hotspots / field pins; update status when actions are shown
Scouting	Main scouting reports: heat grid, routes, spray program, records
Workers	Who is in the field and related worker views
Log spray	Record spray / treatment activity
History	Longer-term trends and greenhouse history

---

3. Daily reports — Dashboard

1. Open **Dashboard**.

2. Read the KPI cards at the top (scouting stops, hotspots, sprays, workers in field, severe issues — as labelled).
3. Check **Needs attention / alerts**.
4. Scan the **live activity feed** for today's field events.
5. Use shortcuts to open Scouting, Map, Workers, or History when you need detail.

Correct usage: Start every morning on Dashboard before assigning spray or follow-up work.

---

4. Scouting reports (main operational report)

1. Open **Scouting**.
2. Review in this order:

1. **Spray / work program** — what needs spray today, within 48h, or monitoring only
2. **Heat grid** — where pressure is highest inside a greenhouse
3. **Routes / stops** — what scouts walked and recorded
4. **Records table** — full list of stops (house, variety, issue, rating, time)

1. Change the **greenhouse** filter to compare houses.
2. Use row/cell drill-down when available to see issue detail.

How to use this for decisions

- High rating + repeated pest/disease → prioritise spray or agronomy visit.
- Empty records for a house that should have been scouted → follow up with the scout team.
- Do not edit scout observations from this screen; ask the scout to re-record if a correction is needed.

---

5. Map usage

1. Open **Map**.
2. Identify open hotspots and spray-related pins.
3. Select a pin/item when the UI allows.
4. If actions such as **Mark sprayed** or **Resolved** appear, use them only when the physical work is done.

Correct usage: Map is for location awareness and status updates — always confirm in the greenhouse before marking complete.

---

6. Workers view

1. Open **Workers**.
2. Check who is active in the field and related greenhouse / problem context.
3. Use this to coordinate which scout covers which house.

---

7. Log spray

1. Open **Log spray**.
2. Enter the spray / treatment details required on the form (greenhouse, product/context, notes as shown).
3. Save and confirm success.
4. Re-check **Dashboard** or **Map** if you expect the status to update.

---

8. History reports

1. Open **History**.
2. Review multi-period views and greenhouse health / improvement style charts.
3. Use History for weekly reviews with agronomy — use **Scouting** for same-day operations.

---

9. Good practice

1. Always use **https://scouting.kongoniriverfarm.com/** (padlock in the browser).
2. One person = one login.
3. If the site does not load on farm Wi-Fi but works on mobile data, tell IT.
4. Report problems with: time, device/browser, your email (not password), screen name, and what you expected.

---

10. Quick checklist (30 seconds)

1. Sign in as Manager
2. Dashboard → alerts
3. Scouting → spray program + heat grid + records
4. Map → hotspots
5. Log spray when treatments are done
6. History for weekly review
