VegPro Smart Farm — Field User Manual

Product: VegPro Smart Farm (Scouting)

Live URL: https://scouting.kongoniriverfarm.com/

Audience: Field scouts (workers)

Version: October 2026 handover

This manual explains step-by-step how to scout correctly on the phone every day.

---

1. Sign in on the phone

1. Connect the phone to farm Wi-Fi or mobile data that can reach the site.
2. Open Chrome (or Safari) and go to **https://scouting.kongoniriverfarm.com/**
3. Choose **Field worker**.
4. Enter your **email** and **password** → **Sign in**.
5. Allow **location / GPS** when the browser asks (required for correct greenhouse assignment).

Training account (change after go-live):

Email	Password
`worker@vegpro.com`	`VegPro2026!`

Your farm will give you your own login. Do not share passwords.

---

2. Open Field work

1. Tap **Field work** in the menu (or open it from Home).
2. Check **Current assignment** (farm / greenhouse).

- Normally this comes from **live GPS** (nearest greenhouse).

- If GPS is weak indoors, use **Override greenhouse**, pick the correct house, then continue.

---

3. Start a scout round

1. Find **Scout route** (round controls).
2. Tap **Start round**.
3. Keep the round open while you walk the house and save stops.
4. When finished, **Complete** the round so the route is closed for reporting.

---

4. Record a scout stop (main procedure)

1. Tap **Scout stop**.
2. Confirm farm / greenhouse shown at the top.
3. Fill the form carefully:

- **Category** (e.g. Cut Rose)
- **Variety**
- **Column / bay / beds** as required
- **Issue type** — pest or disease
- **Issue name** from the list
- **Rating** (severity 1–5)
- Optional **scouting parameters**
- **Notes** if needed

1. Tap **Save**.
2. Wait for the success message before moving to the next stop.

Correct usage rules

- Save only what you observed.
- Use the list values (variety, pest, disease) — do not invent free-text names when a list exists.
- If the greenhouse is wrong, fix **Override greenhouse** before saving.
- Keep GPS on; each save stores coordinates for the farm map and routes.

---

5. Infestation / hotspot and spray (when used)

1. From Field work, open the infestation / hotspot or spray action shown in training.
2. Select the greenhouse / issue context.
3. Attach evidence/photo if the form offers it.
4. Save and confirm success.

---

6. End of shift

1. Complete any open scout round.
2. Sign out if the phone is shared.
3. Do not leave the phone signed in as another person's account.

---

7. Good practice

1. Always use **https://scouting.kongoniriverfarm.com/** (padlock in the browser).
2. One person = one login.
3. Keep location permission on for accurate greenhouse assignment.
4. If the site does not load on farm Wi-Fi but works on mobile data, tell your supervisor or IT.
5. Report problems with: time, phone/browser, your email (not password), screen name, and what you expected.

---

8. Quick checklist (30 seconds)

1. Sign in as Field worker
2. Field work → GPS / greenhouse correct
3. Start round
4. Scout stop → fill lists → Save
5. Complete round → Sign out if shared device
